

Profile

In 1820, a manufacturing facility was initially built in Libavske Udoli, and a time of miscellaneous expansion stages and textile activities followed. In 1995, the company Alligard was founded as joint venture; ever since, it works under German management with sophisticated machinery and motivated employees in the sector of textile manufacturing for various purchasers.

Starting mainly as home fabric production, there had been investments in technical textiles progressively. Today, the manufacturing and processing of technical textiles take up more and more room, and highly diverse technologies can be employed.

Miscellaneous finishing-, coating-, and cutting processes are, along with sewing and airbrush, the basis for a broad range of production facilities at the highest technological stage on behalf of external partners in the textile industry.

A professional stock- and logistics system complete the supply range.

Our highly qualified professionals are able to communicate in Czech, German, and English, and to offer solutions.

The company is certified by DIN ISO 9001 : 2008, and is capable of attending to our customers' wishes on short notice thanks to flexibility, creativity, as well as due to an efficient organisation.

Mission statement

The purpose

To satisfy our customers' needs and to provide them an increment value at all times.

The business

Manufacturing and processing textiles of all kinds, at the highest technological stage, with motivated, highly skilled employees, and a high quality standard

The values

Our corporate culture is characterised by mutual appreciation, fairness, and tolerance. We keep our promises. With professionalism, reliability, and honesty, combined with frankness and trust, we live with a positive basic setting.

Our actions are aimed at obtaining an adequate return.

Services / Performances

Structure:

The equipment is nearly complete made for a width of 3 metres and is usable very flexibly. Rolling, monitoring, winding, doubling, splitting, burning out, etc. are common techniques, which are offered in due consideration of quality - and performance requirements. By means of 3 premium lasers for cutting edges we are able to handle an enormous quantity rapidly.

Airbrush

On 18 tables with a length of 12 metres each and an unit of 3 stages to process material of 3 metres breadth, our long-time trained employees are able to spray any requested kind of graphics by perfect handicraft. The colour blend is implemented with particular colours on the premises.

Finishing

2 finishing frames (Stentex and Brückner) with more than 3 metres work space, Malo adjusting devices, Foulard's pre-dryer and an integrated washing machine (Küsters) enable us to handle large capacities in a three-shift operation. Light coatings and colourings are also possible.

Special realms

Cutting:

Having 2 cutting machines (Calmard), we have the ability to cut with both ultrasound and glow wire.

Thermo-kalander:

We have a 1.5 metres broad thermo-kalander available, which is to print on textiles and printing paper; it is on hand for coatings of all kinds.

Motif print:

Apart from hand presses for simple uses, there is also a Kontinue-Aggregat with a breadth of 3 metres for intensive uses.

Sewing/coupon

It is the sophisticated equipment, even for very specific uses, as well as an experienced team of highly specialised sewers that facilitate the processing from almost all textiles to heavy materials like leather.

A highly efficient coupon unwinding ascertains the delivery of large quantities of coupons within 24 hours.

Stock

We are capable of delivering almost all quantities on time due to a highly efficient logistics, an advanced packaging department, and an DPD linking to our customers.
